

## Mastering in the Box - Read Me

Thank you for subscribing to Waveinformer.

Mastering is an ever-evolving science and art form. Some of the software used in this video, in particular tools from FabFilter and iZotope, have been updated since the making of these videos.

The principles of mastering, however, remain the same.

**Optimizing music for playback in all listening environments is the goal.** Great masters were created before digital audio workstations, and great masters will be created with whatever technology is widely used 50 years from today.

Enjoy the videos, apply the techniques covered with whatever technology you have access to, and have fun practicing mastering using the provided mixes.
